### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

#### **In the claims:**

Claims 23-28 and 30-34 (non-elected without traverse) are cancelled.

#### ***Allowable Subject Matter***

2. Claims 12 and 14-21 (renumbered 1-9) are allowed.

The following is an examiner's statement of reasons for allowance: The general manufacture of pneumatic tire constructions having "locked" carcass assemblies (turnup end positioned between bead core and bead filler) is well known in the tire industry. Powell (GB 1,000,113) provides one example of such a well-known tire construction and further includes a bead-reinforcing layer as required by the claimed invention. However, the tire construction of Powell does not include a rubber layer having the claimed hardness between the bead filler and bead-reinforcing layer and one of ordinary skill in the art at the time of the invention would not have found it obvious to include such a rubber layer in the tire of Powell. On the other hand, Continental (FR 1,596,358) discloses a pneumatic tire construction having a conventional carcass turnup and

additionally including a bead reinforcing layer, wherein a stress-controlling rubber layer is specifically positioned axially inward of the end of said bead reinforcing layer. In this instance, one of ordinary skill in the art at the time of the invention would have found it obvious to form the carcass turnup of Continental as a "locked" carcass in order to improve tire durability (eliminates cut ends due to exposure of carcass cords).

However, Continental specifically states that the relevant rubber layer is "substantially" harder than the surrounding rubbers (reference character 15 defines surrounding rubbers and includes bead filler region and sidewall- see Figure 3). As noted above, the claim requires the relevant rubber layer to have a hardness between that of the bead filler and the sidewall. Thus, one of ordinary skill in the art at the time of the invention would not have found it obvious to manufacture the claimed tire construction.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
